

Nimbus DryIce machine

You will need

Approximately 20L of Water

5 KG of dry ice

1. Fill the water up to the safety line, that is located inside the machine
2. Plug the machine and wait for the water to heat up, the machine will take up to 50 minutes to heat up the water
3. Once heated fill the machine up with dry ice (**Use protective gloves when handling dry ice**)
4. Once the machine is filled with dry ice, you can adjust it to two settings

LOW SETTING

- Roughly six minutes of fog

HIGH SETTING

- Roughly 3 minutes of fog, but fills the area quicker

5. When finished using the machine be sure to empty the water and any ice that might be left in the machine
